

TLDR:

CALENDAR PLANNING: ONLY YOUR INTENTION

ACCOUNTABILITY LOGS: REALITY OF WHAT YOU ACTUALLY DID.

DATA/CONTEXT VALUE: LONG TERM DATA AND CONTEXT COLLECTION OF YOUR LIFE, FOR YOURSELF. THIS COLLECTS VALUABLE DATA ABOUT YOU LIKE NO OTHER.

ACCOUNTABILITY PART IS ONLY MADE POSSIBLE BY SETTING A CLEAR INTENTION (PLANNING - BEFOREHAND). FOR EXAMPLE: EDIT VIDEOS FOR 2 HOURS IS CONCRETE AND EASY TO TRACK.

THE BOGI COACH IS THERE TO HELP MAKE YOU INTENTIONS (PLANNING) CLEAR. CLARITY IS KEY TO PRODUCTIVITY. NOT KNOWING WHAT TO DO CLEARLY WILL OFTEN STOP PEOPLE - ACCORDING TO PSYCHOLOGY.

WE DON'T REFLECT AT THE END OF THE DAY. IT PULLS YOU IN IN THE MOMENT TO MAKE YOU MINDFUL - IN THE MOMENT (SHORT TERM FRAMEWORK - CHECK "THE SOLUTION").

NEW: BETA FEATURE: TRAIN ON USER DATA ON HOW USER WORKS FOR FUTURE PLANNING: FOR EXAMPLE, IF USER HAS HISTORICALLY FAILED TO ACTUALLY REALIZE A 3 HOUR EDITING PLAN SEVERAL TIMES. THE AI COACH WILL TAKE NOTICE AND TAKE IT INTO ACCOUNT IN THE NEXT PLANNING SESH.

BASICALLY AN AI ASSISTANT ACCOUNTABILITY COACH THAT HELPS YOU DO WHAT YOU PLANNED TO DO, AND GIVES YOU DATA ON HOW TO BETTER DO YOUR PLANNING WHEN YOU DON'T

A private AI assistant that's also an accountability coach. You talk to it like Siri ("Hey Boogie"). It helps you plan your day into your calendar, and then it makes you account for how you actually spent each block. The point isn't the planning. The point is getting your time back **by knowing how you spent your time**

A private AI assistant that's also an accountability coach. You talk to it like Siri ("Hey Boogie"). It helps you plan your day into your calendar, and then it makes you account for how you actually spent each block. The point isn't the planning. The point is getting your time back **by knowing how you spent your time**

The Problem

The core problem is simple: your plan and your reality are two different things, and nobody is keeping track of the gap between them.

FOUR SCENARIOS:

Scenario 1 — The person who plans and still loses the day (no ADHD). You plan your day, either in another app or just manually in your calendar. It says: record for 2 hours, edit videos for 3 hours, a couple of meetings, answer emails. You do the first few things fine. Then you get tired, you open your phone "for a second," and 45 minutes of your email hour is gone. Here is the part that matters: your calendar still says "Håkan answered emails." So when you look back at your week, you believe you answered emails. The calendar told a story to your future self, and the story was a lie. You weren't answering emails. You were scrolling. And for people who actually have Instagram and TikTok, it is worse. I barely use social media and it still happens to me. For someone who doomscrolls, that "second" is at least 45 minutes, and it is almost always 45 minutes stolen from work or study.

Scenario 2 — The person with ADHD (much, much harder). For people with ADHD this is not a small leak, it is the whole day. They plan it honestly: "I'm going to sit down and write emails at 11." But they are easily distracted, and the distractions feel productive, which is the trap. On the way to the desk they pass the laundry. "I'll just do the laundry first." Fifteen minutes later: "I'm already up, I might as well clean a bit." Then they're vacuuming the room. Then organizing the desk. Every one of those things is a real, reasonable task. And the entire email hour is gone, not to laziness, but because there is always something else to do and nothing pulls you back to what you actually planned. At the end of the day they genuinely do not know where the time went.

Scenario 3 — The person who simply can't remember. If I walked up to Swedish teenagers today and asked, "Hey, what did you do today?" most of them could not tell me. Ask a friend what they did over the weekend and maybe they remember one thing, maybe nothing. Most people who aren't in a corporate job that forces them to log time have no record of their own life. And some of these people have real ambitions. They were supposed to build an app this month, or hit a goal. Did it work? They don't actually know, because they have no honest picture of how they spent the hours.

Scenario 4 — The "where did my time go?" feeling. This one is the most relatable of all. "I know I didn't wake up that late. Maybe 9 instead of my usual, fine. But it feels like the day just started and suddenly it's already 5pm. What did I even do today?" I've talked to a lot of friends about this and everyone recognizes it instantly. The day evaporates and you're left with a vague, uneasy feeling and no data to explain it.

Why this is not a screen-time app

Here is the important distinction. Screen-time apps try to solve this by *blocking* you. You hit your limit, a wall pops up, you tap "add 15 minutes," and you keep scrolling, totally unmindful. The wall changed nothing because you were never made to think.

This app does the opposite, and the friction is the point. It is not a bug that you have to manually go in and account for your time. It is the entire feature. Think about what a real accountability coach does. A real coach does not silently watch your screen time and quietly log it for you. A real coach *asks you*: "What did you just spend that hour on?" And the moment you have to

answer, out loud, in your own words, you become mindful of what you actually did. That mindfulness is the product. Not the blocking. The honest moment of having to answer to someone.

Why this is not a screen-time app - TLDR

IT'S MEANT TO HAVE FRICTION, LIKE WHEN I HAVE TO TALK TO A REAL ACCOUNTABILITY PARTNER. I HAVE TO FACE WHAT I DID AND REFLECT ON IT-
AWARENESS IS THE FIRST STEP TO IMPROVEMENT

-Håkan Wang quote

The Solution

One sentence: an AI assistant that is also an accountability coach. It helps you plan your day into your calendar, and then it makes you face what you actually did with each block. The whole product lives in one place: **what your calendar said versus what really happened**. And that is for you, not for show, not for anyone else to see. At the end of the day it's your own truth.

This works in two frameworks.

Framework 1 — The daily / hourly view (plan vs reality)

Your day is already made of blocks. A two-hour block is a lesson. A one-hour block is a meeting. A two-hour block is editing. Those blocks are your plan. The coach's job is to check each block against reality when it ends. "You blocked this hour for emailing co-manufacturers. Did you do it? If yes, good. If not, tell me what you actually did, and why."

And the coach can learn your real rhythm. Maybe you never edit for two hours straight. Maybe you edit for one hour and then take a five-minute break. The AI can learn that pattern, and in that natural break it can reach you: "Hey, what did you do this last hour? Did you actually do what you told the calendar you'd do?" The calendar can look beautiful. "One hour: talking to co-manufacturers." Reality might be 30 minutes of that and 30 minutes of LinkedIn. The whole weight of the product is on closing that gap, honestly, for yourself.

Framework 2 — The high-level view (your week, month, year)

Every one of those small honest moments becomes data. So you don't just see yesterday. You can zoom out.

Your week: what did the seven days actually contain? Your month: most people set monthly goals. "This month I'm going to do X." The app answers the one question that usually goes unanswered: *did you actually do it?* And if not, why? You can look back and see honestly: did you do your best and it was simply out of your control, or was it in your control the whole time?

Maybe if you'd done 50% more of the work you could have done, instead of scrolling, you would have hit it. Your year: how did you actually spend your year? Those New Year's resolutions, why didn't they happen? The clearest example is the app you planned to ship and didn't. Now you can look back and see the truth: did you lock in, or did the hours leak away an hour at a time?

Solutions TLDR:

FRAMEWORK 1: ACCOUNTABILITY COACH FOR SHORT TERM. MAKES YOU MINDFUL, SHORT TERM

FRAMEWORK 2: LONG TERM DATA AND CONTEXT COLLECTION OF YOUR LIFE, FOR YOURSELF. THIS COLLECTS VALUEABLE DATA ABOUT YOU LIKE NO OTHER.

The one core feature

The accountability loop. Your calendar has blocks. When a block ends, you tell the coach what you actually did in it. That's the thing nobody else has. Motion plans for you. aölsdkjf plans for you. None of them show the difference between CALENDER PLAN and REALITY. This is both planning (beforehand) and data (afterhand)

The three features around it

1. The AI assistant / planner. You text or talk to it: "I need one hour to edit videos tomorrow," or "someone wants a meeting tomorrow, put it in my calendar." It manages your calendar. This is what creates the blocks the loop reads from. Useful on its own, but it's not why the app exists. BECAUSE THIS ALONE ALREADY EXISTS
2. The time data bank. Everything you log gets CATEGORIZED (with sub categories, and sub sub categories (description). For example: CATEGORY: activity with friend, SUB-CATEGORY: Jumpyard etc) and stored, viewable as today / this week / this month / this year. This is the long-term payoff, and per the council, the real moat. Nobody can copy a year of your real behavior.

This can also be used as a data bank for LLM AI to ask AI questions about your life and make AI recommend ways where you can also improve your life, and GIVE IT MORE CONTEXT ABOUT WHAT YOU'RE WORKING ON AND HOW YOU'RE WORKING

THE DATA BANK HAS THE MOST VALUE. IT IS A REAL MOAT.

3. The honest coach. Not a cheerleader. It knows your goals, reminds you of them, and is allowed to be blunt: "You keep planning to email manufacturers and keep not doing it."
4. NEW: BETA FEATURE: TRAIN ON USER DATA ON HOW USER WORKS FOR FUTURE PLANNING: FOR EXAMPLE, IF USER HAS HISTORICALLY FAILED TO ACTUALLY REALIZE A 3 HOUR EDITING PLAN SEVERAL TIMES. THE AI COACH WILL TAKE NOTICE AND TAKE IT INTO ACCOUNT IN THE NEXT PLANNING SESH.

TLDR:

CALENDAR PLANNING: ONLY YOUR INTENTION

ACCOUNTABILITY LOGS: REALITY OF WHAT YOU ACTUALLY DID.

DATA/CONTEXT VALUE: LONG TERM DATA AND CONTEXT COLLECTION OF YOUR LIFE, FOR YOURSELF. THIS COLLECTS VALUABLE DATA ABOUT YOU LIKE NO OTHER.

Who it's for

Students and normal people, starting in Sweden. Not corporate. People like you. ADHD or not. If you ask most teenagers what they did yesterday, 70% remember one thing and blank on the rest. This is for everyone who wants their time back and wants to actually see how they spend their life.

COUNCIL POINTS:

Second sharp point: vague intentions break the loop. "Be productive" can't be checked, so every block feels like failure. But your calendar-block model already solves most of this. "Edit videos for 1 hour" is concrete and checkable. You're ahead of them here.

Calling and nagging the user to answer after every block, like the screen time apps force them to do, is unnecessary in this case. The downloaders of this app already want to log their time. Even if there's no block for the AI to hold you accountable, the user himself has a very easy way to tell the Accountability coach where the blank five-hour blank time in the calendar went. People are willing to log themselves. The AI shouldn't have to force them by calling them or nagging them through a hundred notifications to make the logging happen, because it is not a screen time app. It helps them take back control of their data, and the downloaders of this app want to have that data.

Bogi core document: The gap between intention and reality is where your life happens

Planeringen och accountability är egentligen inte två features. De är ett loop. Det enda produkten gör är att visa dig gapet mellan vem du sa att du ville vara idag och vem du faktiskt var. Det är hela produkten. Allt annat är mechanics kring det.

The behavioral data bank is the real moat. Not AI categorization (replicable), not the UX (copyable), but the longitudinal pattern database built from consistent loop completion over time. 1,000 users × 100 daily check-ins = compound asset no competitor can fast-follow.
